VIRTUSENSE®

Integrations & Specs

Built for connected clinical workflows.

VSTOne processes safety-related sensor information at the edge and can securely exchange relevant alerts and workflow data with authorized clinical systems. Integrations support the care teams and tools already in use.

STANDARDS

HL7

Supports HL7 v2.x messaging for applicable integration workflows.

FHIR

Supports FHIR R4 for applicable integration workflows.

RESTFUL APIs

Supports integration with authorized third-party systems through configured APIs. Available functionality depends on the integration and deployment.

EPIC INTEGRATION

VSTOne supports integration workflows with Epic environments. Specific capabilities and availability depend on the organization's implementation, licensing, and configuration.

ADT feeds

Patient admission, discharge, and transfer information can support patient and room context for configuredv workflows.

Flowsheet documentation

Relevant event or workflow information may be documented in Epic flowsheets through supported integration pathways.

OpTime, Cadence, Haiku, Rover, and MyChart Bedside TV

Potential workflow touchpoints include these Epic applications and experiences, subject to supported interfaces and site-specific configuration.
